Subject: Carson Introduces the *M-Series* Mechanical Siren Line

Carson Introduces the new *M-Series* Mechanical Tone Siren Line

Indianapolis, IN – Carson Sirens is proud to announce the release of the *M-Series* Mechanical Siren Line. The *M-Series* combines a classic Mechanical Tone, the new Carson Air Horn, and a sleek, silver design with our popular selection of siren tones and the rugged dependability that you expect from a Carson siren. The *M-Series* Mechanical Sirens take warning sound performance to the next level.

The **SA-441M**
MAGFORCE
MECHANICAL

What sets the *M-Series* apart is the authentic reproduction of both a true Mechanical Tone and a Stutter Air Horn sound. This combination offers an effective alternative to the costly mechanical sirens and air horns that are traditionally installed on fire rescue apparatuses. This mechanical siren line eliminates the need for an exterior siren, as well as air tanks, compressors and tubing. These compact sirens are easy to install, space-saving and require much less amp draw, while still delivering that distinctive “Big Engine” sound that makes drivers instinctively pull over.

The *M-Series* line includes both console and remote mount units and is available in four premium models: the SA-400M Classic Mechanical, SA-430M Patriot Mechanical, SA-441M MagForce Mechanical and SA-500M Cruiser Mechanical. Each *M-Series* model comes with a no-hassle 5-year warranty, a standard in Carson Sirens.

For almost 40 years, Carson has built a reputation for consistent quality and rugged reliability in all of its products and services. The *M-Series* further enhances this reputation by raising the standard of siren technology and design. **Look for the *M-Series* today!**
