NOTICE

Due to continuous product improvements, we must reserve the right to change any specifications and information, contained in this manual at any time without notice.

Carson Manufacturing Co., Inc. makes no warranty of any kind with regard to this manual, including, but not limited to, the implied warranties of merchantability and fitness for a particular purpose.

Carson Manufacturing Co., Inc. shall not be liable for errors contained herein or for incidental or consequential damages in connection with the furnishing, performance, or use of this manual.

See www.carsonsirens.com for latest information.

GENERAL DESCRIPTION

The SA-441 Dual Siren Amplifier is a premium unit designed for dual 100W speaker use. The control head is only 1 inch deep and can be installed in minimum clearance areas. Connection between the control head and amplifier is via a single lead wire with common ground.

A 6-position rotary selector switch controls the primary operating modes of Radio, Horn (Standby), Manual, Wail, Yelp, and Phaser. A Dual siren control switch provides additional modes, including dual Wail, dual Yelp, Wail and Yelp, dual Phaser, dual Horn, and Two-Tone. A Siren push-button switch is provided for Manual control of the output tone, Horn, Yelp or Power C override, depending on the selector switch setting. An independent toggle switch controls power. A hole is provided in the amplifier to adjust Radio volume.

Depending upon the version, the microphone may or may not be directly mounted to the control head. Units with an "F" suffix have the microphone permanently mounted to the faceplate. Units with an "FX" suffix are provided with an extension harness and connectors for remote mounting of the microphone. An auxiliary input is provided for connection to a positive or negative horn ring circuit or switch, performing the same function as the Siren push-button.

An 8-position DIP switch on the amplifier allows selection of various options: Two-Tone to replace Phaser, Phaser disable, Horn disable, dual mode disables, and Horn Ring Cyclers 2 (HRC2), which allows cycling through Wail, Yelp, and Phaser by tapping the horn ring when the selector switch is in the Horn position. The front panel is backlit with LED's for night visibility.

This durable unit utilizes short circuit, high voltage, and reverse polarity protection systems for maximum service life over a wide temperature range. Two separately fused amplifiers provide redundancy, and the unit will operate with only one amplifier functioning.

INSTALLATION

Proper installation of the unit is essential for years of safe, reliable operation. Please read all instructions **before** installing the unit. Failure to follow these instructions can cause serious damage to the unit or vehicle and may void warranties.

SAFETY PRECAUTIONS

For the safety of the installer, vehicle operator, passengers and the community please observe the following safety precautions. **Failure to follow all safety precautions and instructions may result in property damage, injury or death.**

Qualifications - The installer must have a firm knowledge of basic electricity, vehicle electrical systems and emergency equipment.

	WARNING Sound Hazard - Sound level from siren speaker (>120dB @ 10 feet) may cause hearing damage.
	Do not operate siren without adequate hearing protection for you and anyone in immediate vicinity. (Ref. OSHA 1910.95 for occupational noise exposure guidelines)

Mounting - Mount the control head for easy access by the vehicle operator. DO NOT mount in air bag deployment area. Assure clearances before drilling in vehicle.

Wiring - Use wiring capable of handling the current required. Make sure all connections are tight. Route wiring to prevent wear, overheating and interference with air bag deployment. Install and check all wiring before connection to vehicle battery.

Testing - Test all siren functions after installation to assure proper operation. Test vehicle operation to assure no damage to vehicle.

Keep These Instructions - Keep these instructions in the vehicle or other safe place for future reference. Advise the vehicle operator of the location.

UNPACKING

Inspect contents for shipping damage. If found **alert carrier immediately**.

Contact supplier immediately if any components are missing.

Contents should include the following items:

Complete Unit

Qty	Item	-10F	-10FX
1	Amplifier, Remote (SA-441-11F or FX)	X	X
1	Bracket, Microphone Clip with mounting screws (CP3633)	X	X
1	Connector, 10-P Terminal Block Plug for Amplifier (CP4833-10)	X	X
1	Cable Assembly for Control Head, 5-P (CP3040)	X	X
1	Control Head with attached Microphone (SA-441-10CH)	X	
1	Control Head without Microphone (SA-441-10CHX)		X
1	Cable, Microphone Extension 18FT (CP3850)		X
1	Microphone, Detachable Noise Cancelling (ES00028-10)		X
1	Instruction Manual (CP5203 This Manual)	X	X

Amplifier Only

Qty	Item
1	Amplifier, Remote Only (SA-441-11AMP)
1	Connector, 10-P Terminal Block Plug for Amplifier (CP4833-10)
1	Instruction Manual (CP5203 This Manual)

OPTION SWITCHES

An 8-position DIP switch on the remote amplifier may be changed to select various options.

SW-1 Two-Tone - Turn this switch on to replace Phaser tone with Two-Tone.

SW-2 Dual Phaser Disable - Turn this switch on for single Phaser tone only.

SW-1 and 2 Phaser Disable - Turn on both switches to disable Phaser tone.

SW-3 Horn Disable - Turn this switch on to disable Horn tone.

SW-4 Horn Ring Cycler 2 (HRC2) - Turn on this switch to enable this feature. Also connect the auxiliary input to the horn ring or other switch. While the siren is in standby, tap the horn ring to bring the unit out of standby into Wail tone. Repeatedly tapping the horn ring will cycle through Wail, Yelp, and Phaser tones. Tapping the horn ring twice quickly will stop the siren tones and return the unit to standby. Pressing and holding the horn ring will produce Horn tone until released. Then the siren will return to its previous siren tone or standby.

NOTE: Earlier units with S/N lower than 04190000 have a different version of HRC. In this case the siren tones cycle through Standby, Wail, Yelp, and Phaser. The tone is stopped by cycling to Standby.

Dual Mode version of HRC2 sequences as described in the following table.

Sequence (Loops)	Dual HRC2	
	Spkr 1	Spkr 2
↓ ↓ ↓ ↓ ↓ ↓	Wail	Wail
	Wail	Yelp
	Yelp	Yelp
	Phaser	Phaser

SW-5 Dual Horn Disable - Turn this switch on for single Horn tone only.

SW-6 thru SW-8 - Not Used... Leave as shown in default setting.

MOUNTING – Amplifier

Select a location for the amplifier in an area such as the driver compartment firewall, under a seat, etc. Mounting the amplifier in the engine compartment or in an area directly exposed to weather is not recommended. Assure adequate ventilation to prevent overheating. Allow clearance for wiring and radio adjustment. Inspect behind mounting area for clearance. Mark the location of the mounting holes to be drilled.

Drill 4 holes (up to 1/4" diameter) to mount the amplifier to the vehicle. Install the terminal block plug and make all electrical connections before final mounting (See ELECTRICAL CONNECTIONS – Amplifier). The plug is secured with the two locking screws. Then mount the amplifier to the vehicle using appropriate hardware (not supplied).

MOUNTING – Control Head

Select a mounting location in an area such as the dash or overhead console. Choose a mounting location convenient to the operator and away from any air bag deployment areas. Inspect behind mounting area for clearance. Allow 1 3/4" of depth to accommodate the control head and cable(s). Consider wire routing and access to connections, as well as microphone bracket placement.

Use template (back page) for marking hole and cutout locations. Connect control head cable to back of unit and route leads through cutout. Make all electrical connections (See ELECTRICAL CONNECTIONS – Control Head), and then use #6 screws for mounting the control head (not supplied).

MOUNTING - Microphone Extension Harness ("FX" model only)

Select a mounting location for the microphone connector, verifying adequate cable length. Allow 1-3/4" clearance behind connector to prevent sharp bends in the harness. Drill or punch a 5/8" diameter hole for mounting. Remove mounting nut and washer from connector. Insert the connector into the hole and secure it using a 3/4" socket to tighten the nut. Connect harness to the control head as shown prior to final installation of head.

ELECTRICAL CONNECTIONS - Amplifier

Electrical connections to the amplifier are made using a terminal block plug located on the amplifier. A label on the unit identifies each terminal function. You should install the plug on the unit before wiring. If the unit needs service the plug can be easily removed without unwiring. The power supply of the unit must be capable of delivering peak currents up to 50 amps for adequate short circuit protection and reliable operation. The preferred source is directly at the vehicle battery. The amplifier is fused near connector.

Attach leads by stripping 3/8", inserting into connector and clamp by tightening screw. Make sure the screw is tight and the wire can't be pulled out.

Failure to adequately tighten the screw can result in improper operation or burning the connector and wire.

Wire Size and Termination - The diagram shows the minimum wire size used for each connection, along with recommended lead color. If the wire is longer than 10 ft. use the next larger wire size. The power lead pairs can be extended with single #10 AWG lead wire. Use only high quality crimp connectors for installation on the vehicle.

Optional Radio Input Connection - Connect one lead to each terminal of the radio speaker or output connector. The input is isolated and polarity is not important. May need to set RADIO VOLUME ADJUST on side of amplifier.

ELECTRICAL CONNECTIONS – Control Head

All control head leads can be extended with #22 AWG or larger lead wire.

Black: Negative - Connect to same ground or negative supply as amplifier.

Red: Positive - May be connected to +VDC supply. It is recommended that the lead be connected to the accessory output of the fuse block. This provides additional protection of a fused input to the control head.

Yellow: Lights - This lead may be connected to the dash lights or to the red power lead. Connecting to the dash lights will turn on the panel lights whenever the dash lights are on. When connected to the red lead, make sure that the ignition switch controls the power to that connection. This prevents the panel lights from being continuously on.

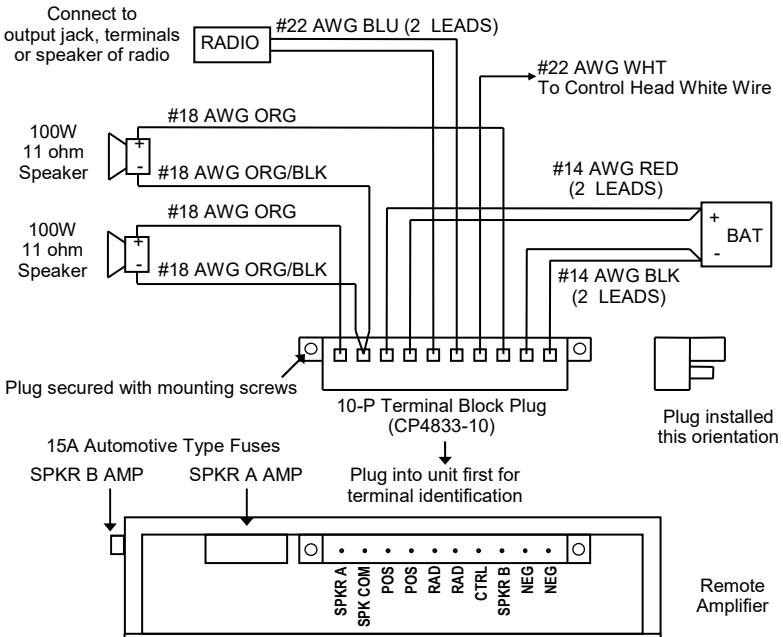

White: Control - Connect white leads from amplifier and control head. Route this lead away from the transmitter antenna lead to prevent R.F. interference being fed to the siren amplifier.

Green: Auxiliary Input - Used for Siren control. Performs same function as Siren button. Connect to a normally open switch or to horn ring circuit. Circuit may connect to either positive or negative. When connected to horn ring circuit, use a SPDT switch to connect horn ring to either vehicle horn or to manual control circuit.

NOTE: Permanent disconnection of the vehicle horn is NOT recommended.

NOTE: Be sure to cut lead short if not used and insulate with electrical tape.

ELECTRICAL CONNECTIONS CONTINUED

OPERATION

	<p>WARNING Sound Hazard - Sound level from siren speaker (>120dBA @ 10 feet) may cause hearing damage. Do not operate siren without adequate hearing protection for you and anyone in immediate vicinity. (Ref. OSHA 1910.95 for occupational noise exposure guidelines)</p>
---	--

GENERAL

This unit is designed for easy operation under the stress associated with high-speed pursuit. Most siren functions are accessible with one simple motion without repetitive activation of switches or automatic timed switching that can interfere with desired operation.

SELECTOR SWITCH

The 6-position rotary selector switch controls the primary operating mode of the siren.

Radio - Also known as Radio Repeat, this function amplifies a radio speaker input for re-broadcast outside the vehicle. The radio must be connected and RADIO VOLUME ADJUSTed for this mode to function.

Horn - A standby (silent) mode that may be overridden anytime with the Siren push-button to produce a simulated Air-horn tone. Horn tone may be disabled.

See OPTION SWITCHES section.

Manual - The siren tone rise and fall is manually controlled with Siren push-button.

Wail - A slower changing tone used on highways.

Yelp - A rapidly changing tone used in congested areas.

Phaser - A very rapidly changing tone used at intersections or in highly congested areas. May be disabled or optionally replaced with **Two-Tone** which is two alternating frequencies like a European HI-LO. See OPTION SWITCHES section.

SIREN SWITCH

This momentary push-button switch provides Manual tone control and various tone overrides depending on the Selector switch setting. It can optionally control Horn Ring Cyclor 2 operation in the Horn position if the **HRC2** option is selected. See OPTION SWITCHES section.

With the **Dual switch OFF**, the following functions are available:

Selector Switch	Operating Mode	Activate Siren push-button or Auxiliary Input Override
Radio	Radio	No Change
Horn	Silent	Horn (Default) or HRC2 (See OPTION SWITCHES section)
Manual	Silent	Manual siren tone
Wail	Wail	Toggle between Wail and Power C
Yelp	Yelp	Horn
Phaser	Phaser	Horn

MICROPHONE (PA Override)

The noise-canceling microphone is used for public address operation and overrides any function when the push-to-talk button on the side of the microphone is pressed.

PA VOL

This control adjusts the PA volume. With the vehicle parked, set the PA volume to the maximum level with no feedback (squeal).

AUXILIARY INPUT

During installation an auxiliary input may be connected to the horn ring or other switching device. It provides the same operation as pressing the Siren push-button.

HORN RING CYCLER 2 (HRC2)

During installation, the auxiliary input must be connected and the HRC2 option selected. While the siren is in standby, tap the horn ring to bring the unit out of standby into Wail tone. Repeatedly tapping the horn ring will cycle through Wail, Yelp, and Phaser tones. Tapping the horn ring twice quickly will stop the siren tones and return the unit to standby. Pressing and holding the horn ring will produce Horn tone until released. Then the siren will return to its previous siren tone or standby. See OPTION SWITCHES section for further details.

NOTE: Earlier units with S/N lower than 04190000 have a different version of HRC. In this case the siren tones cycle through Standby, Wail, Yelp, and Phaser. The tone is stopped by cycling to Standby.

RADIO VOLUME ADJUST

The radio repeat volume level is set using an adjustment on the side of the amplifier. Set the Selector Switch to the Radio position and turn on the power. With the radio volume itself set to a normal level, set the siren radio volume adjust control to the desired level.

DUAL SWITCH

The Dual switch controls the signal to the two amplifiers. With the switch off, the amplifiers produce a common signal to the speakers. With the switch on, independent siren signals are produced by each amplifier as follows:

Rotary Switch	Operating Mode		Activate Siren push-button or Auxiliary Input
	Spkr A	Spkr B	
Radio	Radio		No Change
Two-Tone	Two-Tone		Dual Horn (Default) or HRC2
Manual	Silent		Dual Manual
Wail	Wail	Wail	Toggle between Dual Wail and Dual Power C
Yelp	Yelp	Yelp	Dual Phaser (Dual Horn if Phaser disabled)
Wail-Yelp	Wail	Yelp	Dual Phaser (Dual Horn if Phaser disabled)

SERVICE

This unit is designed to provide years of reliable service under even the worst conditions. Many times there may appear to be a problem with the unit when the true problem is in the speaker(s) or improper installation. The following chart shows typical symptoms and possible causes.

A blown amplifier fuse doesn't necessarily mean that the unit is bad. If a speaker or speaker lead is shorted this fuse will blow before the unit is damaged. Disconnect the SPKR leads and replace the fuse. If the siren emits a sound when in the Yelp position it is OK. Check the speaker(s) or leads for possible shorting.

PROBLEMS

Symptom	Possible Cause	Check
No power or siren output	Power switch not turned on Bad speaker(s) Connector loose Amplifier/control head fuse blown Loose connection at power source	Does backlighting and power indicator on control head come on? Do you hear a "pop" when turned on? Is an external fuse or circuit breaker used? Are the negative leads connected to a good ground?
No siren tone - PA works	High Voltage Protection Mic button stuck	Input voltage must be less than highest rated voltage. Does mic button release properly?
No PA	PA volume not set properly	Have you tried turning the PA volume control?
Distorted siren sound	Speaker assembly loose Intermittent Aux Input connection Low vehicle voltage	Is the speaker bell or tip loose? Is the Aux Input used and wired properly? Input voltage must be greater than lowest rated voltage.
Intermittent siren tone	High Voltage Protection Connector loose Bad power connection Mic button activation Circuit breaker in supply connection	Is the vehicle voltage regulator working properly? Are connections tight on the amplifier/control head? Is there a loose connection on a power lead? Is something lying on the microphone? Is a circuit breaker used with at least a 50A rating?
Horn function Or Manual stuck on	Siren switch stuck Aux Input improperly connected	Does the Siren switch return fully when released? Is the Aux Input used and wired properly?
No Radio	Unit not connected to radio Radio volume too low	Is the radio connected properly to the unit? Can you here the radio in the vehicle? Have you tried turning the radio volume control?
Wrong siren tone	Two-Tone option installed Ground system noise	Is the Two-Tone option selected? Are Control head and amplifier connected to good ground?
Phaser not working	Phaser disabled	Is the Phaser Disable option selected?
Horn not working	Horn disabled	Is the Horn Disable option selected?
Dual switch doesn't work	Only one amplifier working One speaker damaged	Is one fuse on the amplifier blown? Have you tried replacing the speaker?
Constantly blows fuses	Amplifiers wired incorrectly	Are SPKR A and SPKR B wired together?

PARTS and ACCESSORIES

The following parts and accessories are available from Carson Manufacturing Company, Inc.:

Part	Description
CP5018	Button, Switch Cap Red (for Siren pushbutton)
CP4732	Control, 1K Vertical Trimmer (Amplifier)
CP4834	Control, 1K Ohm Vertical Mini-Pot (Control Head PA)
CP4812	Cover, Amplifier (Does not include Chassis)
CP3880	Cover, Control Head back
ATO/ATC 15A	Fuse, 15 Amp Automotive
CP4852	Knob, Selector Switch Knob
CP4853	Knob, PA Volume Control
CP4838	Label, SA-441-10 Front Panel
CP4750	Microphone, Noise Canceling w/Connector
SR-15-1	Microphone Strain Relief
CP5014	Nut, 1/4-40 Dress (for Siren pushbutton)
8121D2V40	Switch, Momentary Push Button, Vertical (Siren pushbutton)
7101-T-C-Q	Switch, Power Toggle
SS2846	Switch, Mini Toggle (Dual switch)
CP3599	Switch, Rotary 6-Pos. Selector, Vertical
CP4119	Transistor, Output (2 required)
Accessory	Description * - standard accessory supplied with unit F or FX model
CP4872	Bracket, Control Head Console Mounting
CP3633 *	Bracket, Microphone Clip with mounting Screws
CP3040 *	Cable, 5-P Control Head Lead Assembly
ED1758	Cable, 10-P Amplifier Lead Assembly 8FT (made w/ CP4833-10 Conn)
CP3850 *	Cable, Microphone Extension 18FT for FX model
CP4833-10 *	Connector, 10-P Terminal Block Plug w/Locking Screws (Amplifier)
ES00028-10 *	Microphone, Detachable Noise Canceling for FX model
SA-441-11AMP	SA-441-11 Remote Amplifier (includes CP4833-10 Connector)
SA-441-10CH *	SA-441-10 Control Head with attached Microphone for F model
SA-441-10CHX *	SA-441-10 Control Head without Microphone for FX model
CP5203 *	Manual, SA-441-10 Instruction

or contact our Service Department at:
E-mail service@carsonsirens.com or Phone (888) 577-6877

RETURN

If you have any questions concerning this or any other Carson product, please contact our **Technical Service Department** at (888) 577-6877. Many issues can be handled over the phone. We can also be reached via e-mail at service@carsonsirens.com

If a product must be returned for any reason, please contact our Technical Service Department to obtain a Returned Merchandise Authorization number (RMA#) before you ship the product to Carson. Please write the RMA# clearly on the package near the mailing label. Be sure to provide a return address, contact and phone number, along with a brief description of the problem.

LIMITED WARRANTY

Carson Manufacturing Company, Inc. warrants this new product to be free from defects in material and workmanship, under normal use and service, for a period of five (5) years from the date of delivery to the first user-purchaser.

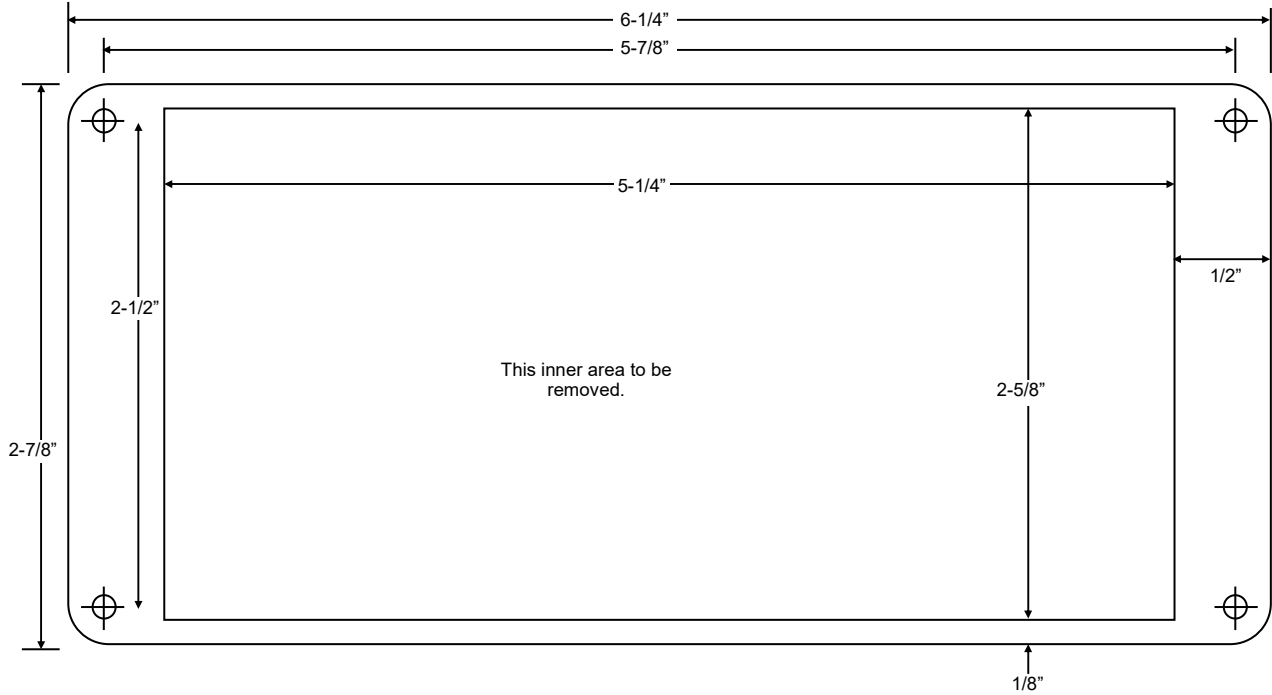

During this warranty period the obligation of Carson Manufacturing is limited to repairing or replacing, as Carson Manufacturing may elect, any part or parts of such product which after examination by Carson Manufacturing is determined to be defective in material and/or workmanship.

This warranty does not cover labor charges for removal or re-installation of the product. Fuses and lamps are not covered under this warranty.

This warranty does not extend to any unit that has been subjected to abuse, misuse, improper installation or which has not been adequately maintained, nor to units which have problems related to service or modification at any facility other than Carson Mfg.

THERE ARE NO OTHER WARRANTIES, EXPRESSED OR IMPLIED, INCLUDING BUT NOT LIMITED TO, ANY IMPLIED WARRANTIES OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL CARSON MANUFACTURING COMPANY, INC. BE LIABLE FOR ANY LOSS OF PROFITS OR ANY INDIRECT OR CONSEQUENTIAL DAMAGES ARISING OUT OF ANY SUCH DEFECT IN MATERIALS OR WORKMANSHIP.

CONTROL HEAD INSTALLATION TEMPLATE

CAUTION: Please note that top and bottom edges only provide 1/8" overlap. Cut carefully.
